CHEMICAL LITERATURE
AND ITS USE

NOTES OF A COURSE OF LECTURES, IN CHEMISTRY 2
REQUIRED OF THIRD YEAR STUDENTS IN
CHEMISTRY AND CHEMICAL ENGINEERING
UNIVERSITY OF ILLINOIS

PREFACE

These notes were compiled to serve as a brief guide to the increasing flood of chemical literature. They are prepared for the use of students who have a working knowledge of French and German, and have had two years of college chemistry. Similar work might be arranged for auditors, or other branches of science where the literature is largely in serial form.

The lists are in no sense exhaustive, but include the works at hand that seem most important, with special reference to the training of students in the use of serials and books. Each student looks up a number of problems during the year in the department library.

A course, Chemistry 82, Chemical literature and its use, once a week for one year has been given to juniors in the course in chemistry and chemical engineering, at the University of Illinois, since 1913. Valuable advice received from members of the departmental faculty has resulted in various revisions of the work.

Thanks are due in particular to Dr. G. G. Devick, former assistant professor, for his helpful suggestions and counsel; and to Mr. C. N. Palmer, for helpful suggestions and aid in reading the proofs.

PREFACE TO THE SECOND EDITION.

The second edition, I.o, with a few exceptions, much like the first; more data on certain works have been given, errors corrected, and some new books and serials added. The number of the lectures has been increased; this makes possible an amplification of the section, Suggestions upon looking up all literature of a subject, as Lectures 7 and 16.

In the second edition Lecture 8 includes first, original reference books, and second, suggestions upon looking up patents; for the patents in particular, I am indebted for much help to the paper by F. E. Barrows, noted in the Bibliography, which is placed after the last lecture on pages 76-80. The list of patents in the Bibliography makes evident the value that is attached to the knowledge of the literature.

It gives me pleasure to acknowledge here the kindness of Dr. R. Adams, Mr. G. D. Read, and Dr. H. B. Lewis, who read the manuscript and suggested important additions to the lists.

CONTENTS

PREPARATION

Lecture 1
Classification and arrangement of books and serials
General reference works
Abrege of Decimal Classification
Lecture 2
Literature on the history of chemistry
Habit chemical laboratories
Chemical societies
Lecture 3
General chemistry
Books
Serials
Lecture 4
Analysis: Books and serials
Appendix: Books and serials
Lecture 5
Inorganic and mineral chemistry
General works
Books on special topics
Lecture 6
Inorganic and mineral chemistry
General serials
Special serials
Lecture 7
Suggestions upon looking up all the literature for a topic in general, inorganic, or analytical chemistry
Library books
Reference serials, general and special, in order of time
Lecture 8
Bibliography on the history of chemistry
References
Lecture 9
Organic chemistry
Books
Works of reference
Lecture 10
Organic chemistry
Serials
Patent literature
Lecture 11
Applied chemistry
General works
Books on special topics
Lecture 12
Applied chemistry
General serials
Serials on special topics
Lecture 13
Chemical and physical chemistry: Books
Chemistry of colloid: Books
Lecture 14
Thermos and physical chemistry: Serials
Chemistry of colloid: Serials
Lecture 15
Biological chemistry
Books
Serials
Lecture 16
Biological chemistry
Books
Serials
Lecture 17
Suggestions upon looking up all the literature for a topic in organic, applied, or physical chemistry, or biochemistry
Bibliography
Some papers upon the raise and utilization of chemical literature
Sample problems, for Lectures 4, 7, 12
